FAQ.vue - more tidying of messy markup. It's now acceptable

commit c4629e44aa50d2ac957c14068919f41eaa9db274
Author: Ed Bradbury <edrad005@gold.ac.uk>
Date: Fri Apr 23 14:15:59 2021 +0100

Tried to sort out the messy indentation in FAQ.vue's markup, although it wasn't clear what whoever created this component was high on when they wrote it

commit 9c4ee5f5f9568340e0e131197c5a98566a0213db
Author: Ed Bradbury <edrad005@gold.ac.uk>
Date: Fri Apr 23 14:09:53 2021 +0100

FAQ.vue - turned out I actually hadn't removed the populateQuestions method - have now, since it's redundant due to questions being computed property

commit a4523a95451a458aea342dc40880384165f1f4b7
Author: Ed Bradbury <edrad005@gold.ac.uk>
Date: Fri Apr 23 14:02:39 2021 +0100

FAQ.vue removed reference to populateQuestions from the last line of translate method. Had removed the populateQuestions method from component at last commit

commit a4ae7941bbaa5ed4cbc5afe39907c013925b83c7
Author: Ed Bradbury <edrad005@gold.ac.uk>
Date: Fri Apr 23 14:00:02 2021 +0100

Hopefully fixed translation of FAQs by making questions[] a computed property

commit 7e95d23ddab2b497187312ac84fd19502109a022
Author: Ed Bradbury <edrad005@gold.ac.uk>
Date: Fri Apr 23 13:50:20 2021 +0100

FAQ.vue - questions & answers are being translated but the questions array is still all in English. Tried moving populateQuestions() into the translate method

commit 98ae0713d61570f05008bc9ea1100d98534ee5
Author: Ed Bradbury <edrad005@gold.ac.uk>
Date: Fri Apr 23 13:43:40 2021 +0100

Sorted out the mess that was FAQ.vue (questions & answers were hardcoded in the markup in English! Now they are data properties which will be translated on component creation. And the markup uses a v-for directive to create a div for each q/a object, so markup is tidier)

commit b08d94b55b4f870c193adcd4e8df5ba543700fd2
Author: Ed Bradbury <edrad005@gold.ac.uk>
Date: Fri Apr 23 13:17:07 2021 +0100

More tidying up of css rules, this time in FAQ.vue

commit 5d56a2e405c62796c4bda7a5099e76f065cfe4a6
Author: Ed Bradbury <edrad005@gold.ac.uk>
Date: Fri Apr 23 13:11:37 2021 +0100

Tidied up horribly messy CSS rules because these kids don't understand the concept of indentation. Removed a load of messy commented out stuff from App.vue's markup. Fixed incorrect references to faq in the 'to' attribute of router links in Menu.vue

Conversation.vue - removed redundant code to sort messages in a chat with newest at top. Didn't realise Array.reverse method existed... Messages.vue - conversation overviews should now always be displaying the correct sender, with the time and date of the most recent message & text of most recent message

commit 7ae23e6ad5a2953c974cc91228f97086517b2d1
Author: Ed Bradbury <ebrad005@gold.ac.uk>
Date: Thu Apr 15 18:55:03 2021 +0100

Forgot I wanted to call Array.reverse on messages in the created method of Conversation.vue

commit b639f60dd9d2362ebfa824ffa2e9230096ff0229
Author: Ed Bradbury <ebrad005@gold.ac.uk>
Date: Thu Apr 15 18:47:14 2021 +0100

Conversation.vue : causing strange behaviour in Messages.vue because of assigning its 'messages' property a reference to currentConvo, which is a reference to an array in Messages. Changes to the messages array in Conversation therefore impacting in Messages.vue (if you've just viewed or replied to messages in a given conversation and then click back to return to conversations overview - exiting the current chat - messages in that conversation are in reverse order. Causing problems displaying who the chat is with and the most recent message/time of most recent message)

commit 5eb6a67f830864053bf899cc95b2f76a1aa747e4
Author: Ed Bradbury <ebrad005@gold.ac.uk>
Date: Thu Apr 15 17:27:34 2021 +0100

Fixed a bug with translating the Request objects text - was only translating the text when userLang !== 'en'. Not helpful for tutors who will primarily be English and need to read the text which would've been written in another language! Also experimenting with strange behaviour between Messages.vue & Conversation.vue regarding order of messages in array & consequent problems

commit 40c1eeca33c2e656c6339d3daf0c75745ee9a40d
Author: Ed Bradbury <ebrad005@gold.ac.uk>
Date: Thu Apr 15 16:45:05 2021 +0100

Bug fixes: NewMessage.vue cancel() method sets requestObject property in Vuex state store to null, so Messages.vue hides the reply to request section and instead shows list of conversations (hopefully). Also appears I misnamed the event handler for newMessage() on the instance of Conversation component on line 4 of Messages.vue (was newConversation should have been newMessage)

commit 5e219f6cf3429f651d96f6260ec80d9173d5d5bb2
Author: Ed Bradbury <ebrad005@gold.ac.uk>
Date: Thu Apr 15 16:17:48 2021 +0100

NewMessage.vue – cancel() method: if 'back' button is clicked (which is when a user decides not to reply to an existing conversation and wants to go back to the overview of conversations in Messages.vue), reset the state properties in Vuex store for currentConvo and mode

commit c51b091d90e2bb936a213dd29afaeabc9a55a8376
Author: Ed Bradbury <ebrad005@gold.ac.uk>
Date: Thu Apr 15 15:55:27 2021 +0100

Added updateState() method in Menu.vue, attached with click handlers on the navigation links displayed to logged in users (home, requests & messages). Resets the state properties in Vuex store to defaults for 'mode' (used in Messages.vue), requestObject (NewMessage.vue uses this) and currentConvo (NewMessage.vue uses this).

Resetting properties of App.vue to falsy values on timeout appears to work as expected. Have removed some probable redundant event emissions from the created() method in Index. Was emitting events to set username & use rId properties of App, but App.vue has a watcher for loggedIn which clears those properties when loggedIn is false, so Index should only need to emit loginStatus event and App will clear those properties

Added 'sessionTimeoutRedirect()' method in Requests.vue, NewRequest.vue, Messages.vue, Conversations.vue & NewMessage.vue. Our Express API now uses Passportjs authentication to protect some routes. If authentication fails, HTTP request data isn't processed and instead, a string 'notAuthenticated' is sent in response. Hence added logic to those components to redirect user to Index.vue in its logged out state when notAuthenticated response is received

Realised the call to getMessages on line 212 of Conversation.vue was actually necessary for updating conversation's messages after a message is deleted - the newMessage listener on line 53 is listening for an event emitted from NewMessage.vue component, now from Conversation. So reinstated the call to getMessages on line 212 and gave it the argument it was previously missing

Text on Cancel button in NewMessage.vue component should now say Cancel if replying to a help Request for 1st time but say Back if replying to an existing chat. Messages.vue now listens for newMessage events. A new message being added to a conversation triggers Messages.vue to re-fetch its conversations so they contain the most recent messages. So if user replies to a chat & clicks back (to conversations view), then reopens the same conversation, Conversation.vue is passed the updated array of messages
